GQI Business Meeting

GQI Exec

- Past Chair: David Divincenzo
- Chair: Dave Bacon
- Chair-elect: Chris Fuchs
- Vice-chair: John Preskill
- Treasurer: Ivan Deutsch (aka MR. BARCELONA)
- Member at Large: Ivette Fuentes-Schuller

GQI APS Fellow

- Luming Duan (University of Michigan)
- "For his distinctive contributions to theoretical atomic physics and quantum information, in particular, for his seminal proposal for quantum information protocols involving atom-optical systems"

GQI APS Fellow

- Wojciech Zurich (Los Alamos)
- “For his seminal contribution in the theory of quantum decoherence, and his contributions to quantum foundations more generally.”

GQI APS Fellow

- Deadline for nominations this year:
  May 1, 2010

Finances

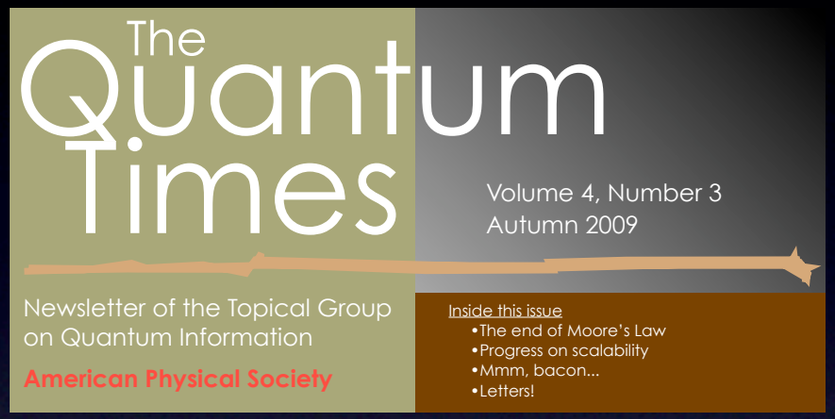

Ivan says: Finance are good, GQI has over $22K in the bank.

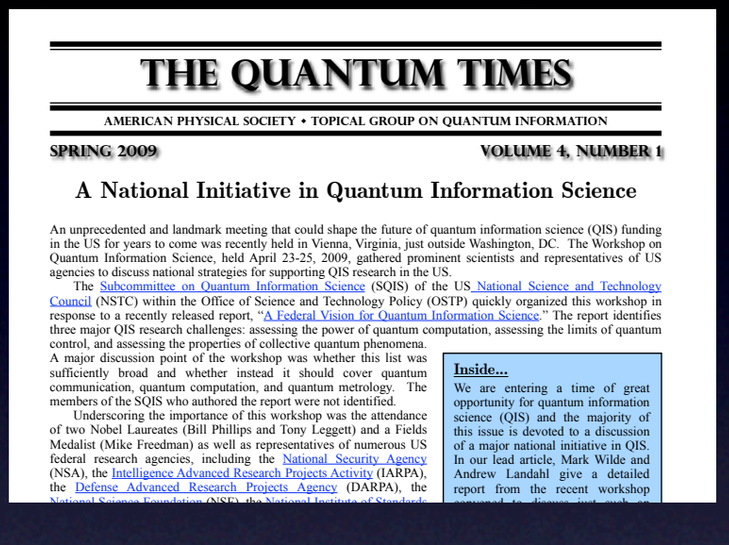

March Meeting

- 22 GQI sponsored/cosponsored session (~330 talks)
- 3 invited sessions “Quantum Computer Science”, “Superconducting Qubits”, “Quantum Opto-Mechanics” (joint with DAMOP), “Controlling Dissipation in Quantum Systems” (joint with DAMOP)

A National Initiative in Quantum Information Science

An unprecedented and landmark meeting that could shape the future of quantum information science (QIS) funding in the US for years to come was recently held in Vienna, Virginia, just outside Washington, DC. The Workshop on Quantum Information Science, held April 23-25, 2009, gathered prominent scientists and representatives of US agencies to discuss national strategies for supporting QIS research in the US.

The Subcommittee on Quantum Information Science (SQIS) of the US National Science and Technology Council (NSTC) within the Office of Science and Technology Policy (OSTP) quickly organized this workshop in response to a recently released report, "A Federal Vision for Quantum Information Science." The report identifies three major QIS research challenges: assessing the power of quantum computation, assessing the limits of quantum control, and assessing the properties of collective quantum phenomena.

A major discussion point of the workshop was whether this list was sufficiently broad and whether instead it should cover quantum communication, quantum computation, and quantum metrology. The members of the SQIS who authored the report were not identified.

Underscoring the importance of this workshop was the attendance of two Nobel Laureates (Bill Phillips and Tony Leggett) and a Fields Medalist (Mike Freedman) as well as representatives of numerous US federal research agencies, including the National Security Agency (NSA), the Intelligence Advanced Research Projects Activity (IARPA), the Defense Advanced Research Projects Agency (DARPA), the

Inside...

We are entering a time of great opportunity for quantum information science (QIS) and the majority of this issue is devoted to a discussion of a major national initiative in QIS. In our lead article, Mark Wilde and Andrew Landahl give a detailed report from the recent workshop

Ians Durham says: please contribute articles!
